

THE PROBLEM | Conversations with doctors are full of meaningful moments. However, for most people, the details of these conversations fall through the cracks, with people forgetting up to 80% of what was discussed. Recognizing that the most essential part of one's health journey happens between visits, how can anyone follow through? Further, when patients struggle, so do their doctors and nurses. Clinicians want the best for their patients and know that care doesn't just happen in the clinic. But when they put in all that effort at a visit, why does the patient only get to hear their advice just once?

THE INTERVENTION | Abridge is a second pair of ears that helps people better understand and follow through with their care. From routine appointments to specialist visits through in-person or virtual first care (V1C), Abridge makes it easy to record a conversation securely. When the appointment is over, Abridge's bleeding-edge machine learning creates an interactive transcript of the medical parts of the conversation that flags key follow-ups and provides definitions for medical jargon. For V1C visits, clinicians and other healthcare professionals can record a summary of patient instructions to automatically send to patients after the visit. And through that seamless experience, clinicians can also get a head start on their documentation.

Components:

Synchronous and/or asynchronous virtual interactions between a clinical team and an individual

Personalized digital content supporting individual education and self-management in their health journey

Technical support to accommodate literacy, language, access, and technological barriers to adoption

Caregiver support (e.g., app with resources)

THE RESULTS | Abridge already helps tens of thousands of people stay connected to their care. In the last year, Abridge has defined 2.4M medical terms and flagged 164,000 follow-ups and takeaways for people. People who use Abridge say they can now understand all of the details of their care. They can listen actively when they're at an appointment without the pressure of taking notes in real-time, better understand what was discussed, and have more clarity on what to do next after every medical conversation. Patients also report increased confidence in the care plan and trust in their relationship with their clinician. Abridge also helps keep family and a person's support team informed without requiring a loved one to attend every visit. Care coordination is easier as people have a better understanding of their care, which empowers them to advocate for themselves and share prior doctor's advice with other clinicians.

“With Abridge, you have the doctor's summary and what you talked about right there for you all the time. A lot of times, you can't always remember what the doctor said. The summary in Abridge brings back everything.”

THE BENEFITS | Interconnectedness

Through Abridge's V1C approach, clinicians summarize key next steps so patients can revisit their advice, improving the likelihood of it being followed and enhancing the quality of their care. Ultimately, Abridge helps people connect the dots, whether keeping their family on the same page or sharing crucial details from one specialist to another.
